

Feedback Comment Bank

Write the **code** on the paper, or paste the full comment into your LMS. Every comment ends with the fix.

Boolean (B)

Code	Comment
B1	When distributing <code>!</code> , <code>&&</code> becomes <code> </code> (and vice-versa). You kept the same connective — apply De Morgan fully.
B2	Boundary bug: check <code>>=</code> vs <code>></code> at the cutoff. A score exactly at the boundary falls in the wrong branch right now.

Control (C)

Code	Comment
C1	Your else-if chain has an unreachable branch — an earlier condition already catches those cases. Reorder or fix the ranges.
C2	You used separate if statements where else-if is needed, so multiple branches run. Chain them with else.

Objects (O)

Code	Comment
O1	Comparing objects with <code>==</code> tests references. Use <code>.equals()</code> for contents.

Positive (G)

Code	Comment
G1	Clean grade logic with correct boundaries — the <code>>=</code> cutoffs are exactly right.
G2	Correct De Morgan transformation, connective flipped and all. Nice.
