

Feedback Comment Bank

Write the **code** on the paper, or paste the full comment into your LMS. Every comment ends with the fix.

Design process (D)

Code	Comment
D1	Your process looks one-and-done — show at least one loop where testing changed your design.
D2	Purpose is too vague ('a cool app'). State who it's for and the specific problem it solves.
D3	Input and output are swapped/merged. Input = what the user gives; output = what the app returns.

Testing (T)

Code	Comment
T1	Your test log records that you tested but not what you changed as a result. Add the change.
T2	Feedback needs a real user, not 'people liked it.' Name who tested and what they said.

Positive (G)

Code	Comment
G1	Excellent — you named a real user and a real need, and your change came directly from their feedback.
G2	Clear purpose, input, and output. That's exactly the framing the Create PT rewards.
