

Feedback Comment Bank

Write the **code** on the paper, or paste the full comment into your LMS. Every comment ends with the fix.

Loops (L)

Code	Comment
L1	Off-by-one on iteration count — recheck the start and end of the loop range at the boundaries.
L2	You didn't track the accumulator each pass. Show its value as the loop runs, not just at the end.

Traversals (T)

Code	Comment
T1	Initializing max to 0 fails when all values are negative — start with the first element instead.
T2	Your accumulator resets inside the loop, so it only reflects the last element. Move the initialization above the loop.

Lists (S)

Code	Comment
S1	Index out of range — remember list positions and the last valid index. Recheck your bounds.

Positive (G)

Code	Comment
G1	Clear pass-by-pass trace. That's the exact skill the AP code-reading questions test.
G2	Robust max traversal — starting at the first element handles every case. Nice.
